

# NAVAL ACOUSTIC CLADDING APPLICATION

## A dedicated service

SeaTec offer a comprehensive service for the application and maintenance of acoustic cladding systems typically found on naval vessels.

## Surveys, application and repairs

- Dry dock and In-water (including above and below surface) surveys of cladding fits
- Submarines, surface ships, acoustic test tanks and chambers
- On-site supervision by accredited cladding engineers who can advise on cladding management processes, work procedures, selection of equipment and materials.
- Application and repairs of cladding systems by trained and experienced technicians and divers either above or below the waterline.

## Training

- Training of Applicators using the 'VISA' process. Suitable for large areas of tile fits in environmentally controlled conditions
- Training of Applicators (also divers) in the 'SCAP' process. Suitable for small scale repairs in open environments, including damp, wet and underwater conditions

*Right: Cladding training on overhead rig (top first). Specialised tooling in place on overhead rig (second). Acoustic chamber being clad internally with damping tiles (third)*
